

i3MOMENTUM

SEAMLESSLY INTEGRATE TECHNOLOGY
IN YOUR MEETING ENVIRONMENT

TECHNOLOGIES
MEETING

CORPORATIONS CONTINUOUSLY HAVE TO INTEGRATE NEW TECHNOLOGIES AND ADDRESS NEW ISSUES DUE TO OUR GLOBALIZING WORLD

Our world today is so interconnected that big problems anywhere are becoming everyone's problem. This constant change will require corporations to adapt to different situations, adopt new technologies and address global issues.

The changes in the field of technology are clearly felt in corporations. The knowledge of science increases exponentially and scientists announce the start of a new era: the era of information exchange. New technologies need to try to promote information exchange.

Research has proven the positive effect of technology on problem solving in meetings. Two important conditions are the promotion of creative thinking and the ease of use and 'always on' state of the technology that people want to use. In our i3 philosophy, we address these challenges through training and professional development, and thorough integration of hard- and software with the environment in which the technology will be used.

Read on to discover how we conceive these integrated solutions and some ways in which you could use them for your benefit.

Our answer to change is summarized in the i3 philosophy: interactive, integrated and inspiring environments. i3 is intended as a blueprint for the meeting environment of corporations, both physical and virtual — inside and outside of the meeting room. As designers, architects, managers and manufacturers, we work together to create complete solutions with the end vision in mind. That vision leverages the individual talents of all participants through flexibility, technology and meaningful use of all resources.

*“seamlessly integrate
technology in your meeting
environment”*

i3MOMENTUM

The i3MOMENTUM is an innovative wall-based rail system designed to seamlessly integrate various technologies such as interactive whiteboards, LCD touchscreens, interactive projectors and more, into a flexible and modular boards system. Its unique modularity offers users a timeless and minimalistic design, advanced functionality, and flexibility to enhance communication and collaboration in any meeting environment.

ENHANCE COMMUNICATION

i3MOMENTUM accommodates up to 3 levels of display surfaces to enhance communication in any meeting environment.

It allows for the effective use of storage, technology and display boards to support different types of meetings by using a combination of:

- Static whiteboard/chalkboard and bulletin/tack board surfaces
- Modular, lightweight and mobile sliding writing boards

- Advanced wire management capabilities facilitate the integration of interactive whiteboards, projectors, LCD touch screens and are ideal for retrofit applications
- Modular, rail-mounted storage cabinets conceal technology components and additional equipment to provide easy access (security options available).

ARCHITECTURAL ELEMENT

i3MOMENTUM seamlessly integrates technologies into a flexible and modular boards system in order to create a customizable solution for any meeting environment.

i3MOMENTUM features a flexible design: it transforms the dynamic board solution into an architectural element and offers a wide range of surface materials and customizable components:

- Whiteboards are available in white, red or black enamel finishes
- Thin profile frames minimize visual distraction to create a timeless aesthetic
- Acoustic fabric and self-repairing tack panels come in a variety of textures and colors as well as COM options
- Our design specialists would be happy to help you visualize your optimal solution with full color renderings

INTEGRATE TECHNOLOGY

i3MOMENTUM is designed to integrate technologies seamlessly in different ways:

- The top rail acts as a wire management to conceal technology components
- Level 0 panels float 1/2 inch off the wall surface to create more opportunities for wire management
- Storage cabinets have pre-drilled wire management holes as default and are most suitable for the accommodation of speakers and CPUs

- Supports new technologies such as: interactive whiteboards, digital LCD touch screens, interactive projectors, whiteboards and i3SWEZZ
- The modular framework is ideal for retrofit applications by using pre-existing technology solutions in combination with interactive whiteboards or digital monitors to create one highly integrated wall solution
- Does not contain built-in technology, which means i3MOMENTUM adapts to whatever technology the users select

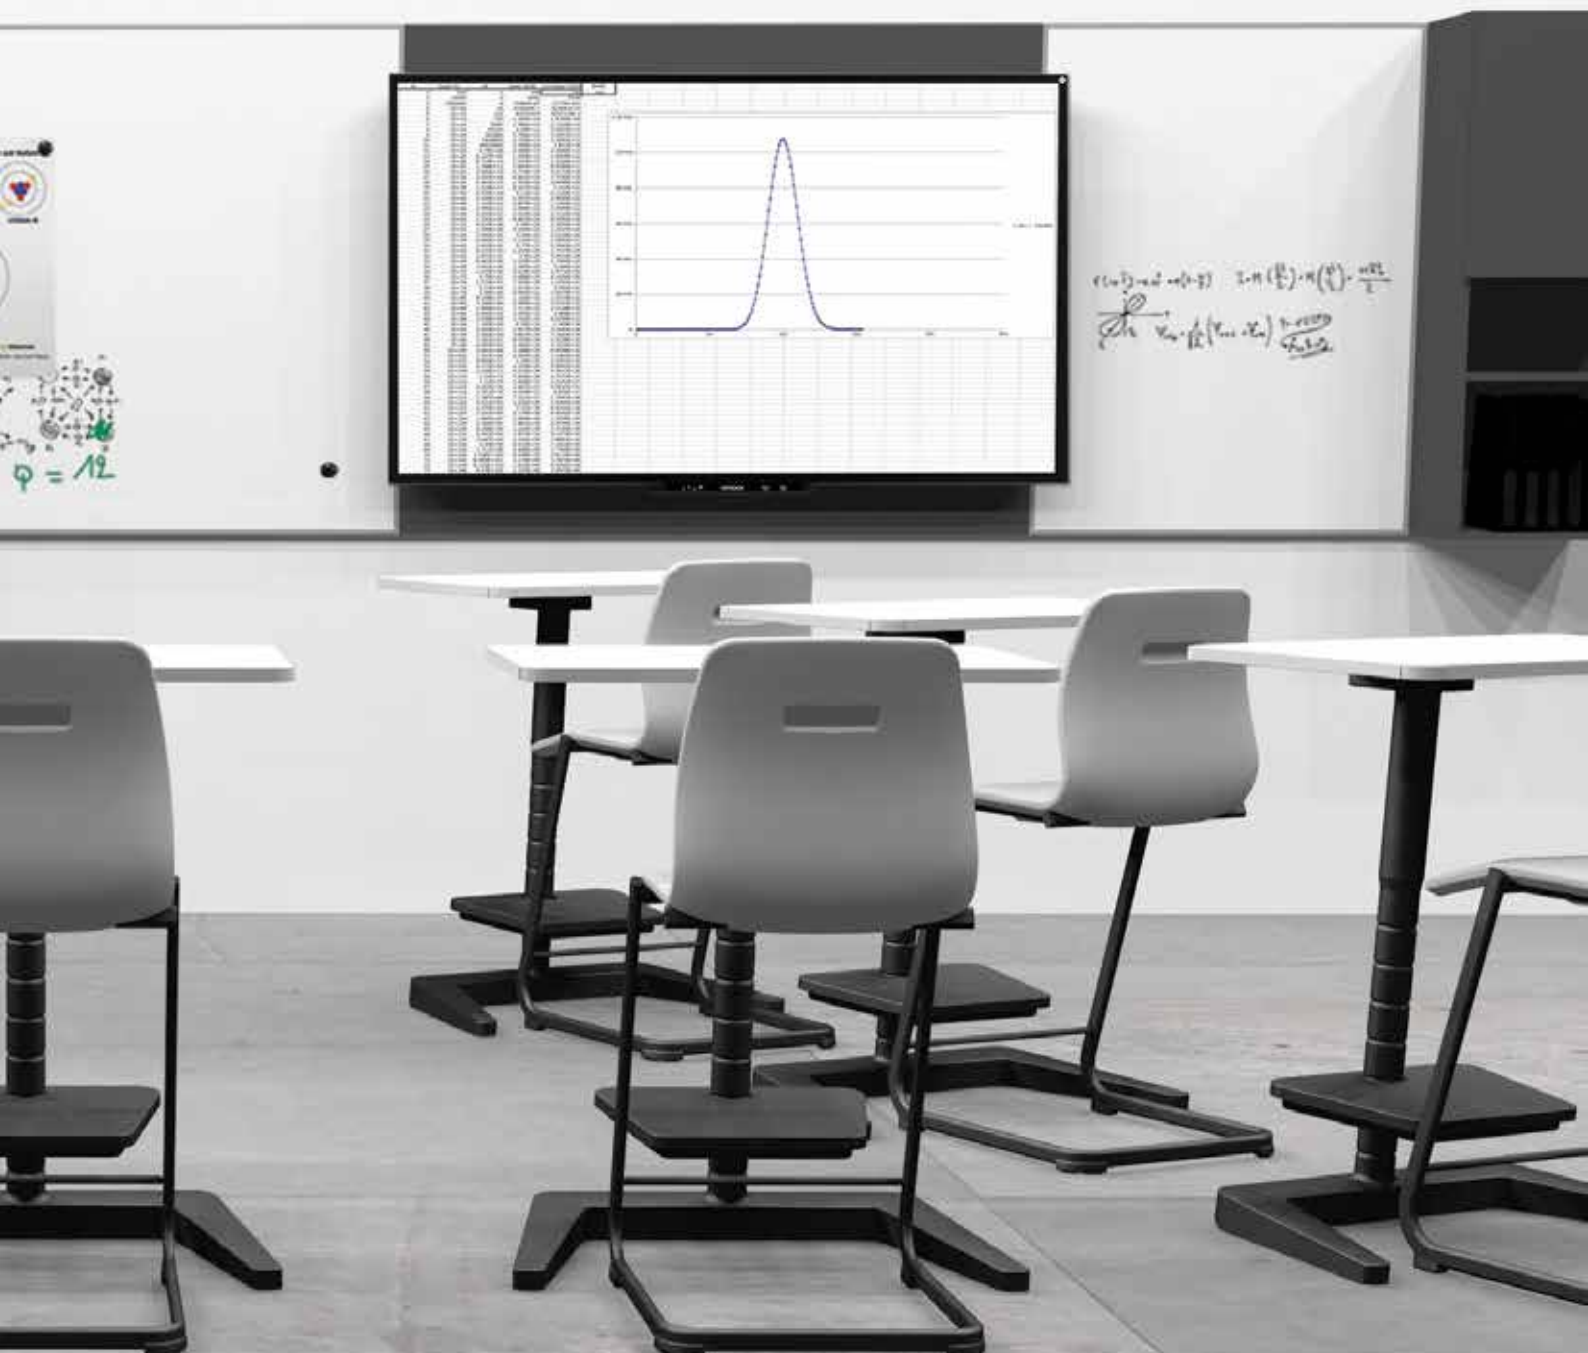

FOCUS ON DETAILS

By paying close attention to details, we can create an intuitive and optimal solution with advanced functionality

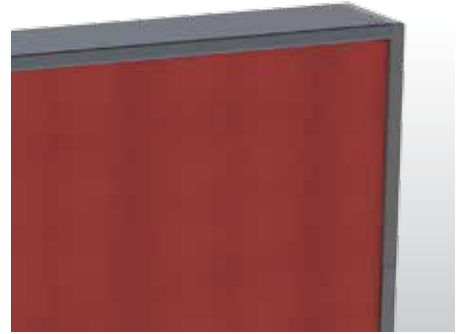

- i3MOMENTUM rails are highly engineered to support the three levels of board displays and are made from an extruded aluminium to encourage recyclability at the end of the product's life cycle
- Honeycomb extrusions ensure strength and durability while they reduce the weight of the mobile hanging boards. Specialized rubber wheels ensure quiet movement while the integrated bumpers reduce noise upon impact with other level 2 components

- All frame edges are ergonomically contoured to reduce sharp edges during reconfigurations and movement of boards on any level
- Level 1 boards can quickly become level 2 boards with the addition of the level 2 bracket and vice versa to increase flexibility
- The enamelled surface of the whiteboard is 99.9% recyclable and provides users with a lifetime warranty. Low gloss whiteboard surfaces can serve as projection surfaces
- Safety tested accordingly to EN 14474

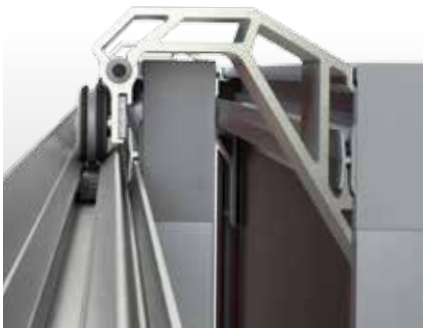

STYLE

Edge profiles are extremely slim and have a width of less than 5mm. They add style and class to the board system and maximize the workable surface. The board profiles extend behind the panels to add strength and stability to the system. A hanging bracket is integrated into the horizontal profile.

SLIDING BRACKET

Sliding brackets allow you to convert any writing or display board into a sliding board unit. They are designed to be extremely durable to maintain alignment, regardless of the size and weight of the component.

SLIDING ELEMENT

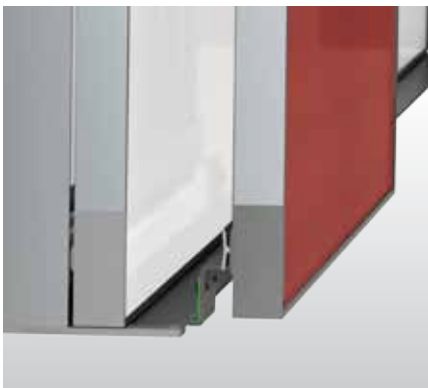

Sliding elements are equipped with dual wheels for maximum stability and effortless movement. The rubber wheels and sound absorbing bumper ensure smooth movement across the unit and reduce noise when boards collide with each other. i3MOMENTUM wall profiles can be interconnected to build tracks as lengthy as needed to fit spaces of any size.

EXPLODED VIEW OF SYSTEM

i3MOMENTUM consists of three distinct levels, all of which support visual communication and technology integration. Level 0 is an aluminium frame which acts as the foundation of the entire system. It is mounted directly to the wall and supports all of the i3MOMENTUM components. Level 1 supports the modular boards, panels and cabinets.

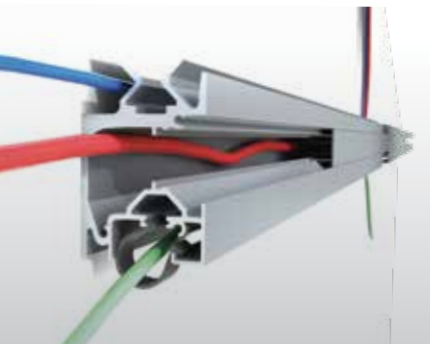

CABINETS

The cabinets are designed to accommodate additional equipment such as speakers, CPUs or other technology components. There are open and closed shelves, and closed cupboards for wire management.

TRAY

A wide tray is an integrated part of the wall frame and provides ample room for writing tools and erasers. It also acts as a safety device for the sliding unit: components are protected from falling when they collide with each other. High quality plastics and discretely rounded corners add extra safety.

WIRE MANAGEMENT

i3MOMENTUM wall-rail allows for concealed and safe wire management of all technology components. Wires can be arranged within the rail at three different levels: on top, inside or underneath the top track, so that an optimal solution can be created for every occasion. An aluminium cap securely locks wires into the rail for a clean look.

The modular sizes can be freely combined and rearranged for a variety of uses. Level 2 hanging boards and panels feature a specially engineered wheel system that allows for the boards to glide smoothly and quietly across the top rail to reveal or conceal information and technology components as needed. i3MOMENTUM rail system accommodates up to 3 levels of display surfaces and can be rearranged for every occasion, at any time. Aluminium extrusions combine a nice design, strength, low weight and a low environmental impact.

TECHNOLOGIES

INTERACTIVE • INTEGRATED • INSPIRING

i3-Technologies is a global company. Every day we gain new impressions about the accelerators behind the shift that is happening in learning and meeting environments. This shift influences the way we at i3-Technologies think about furniture and technology. And ultimately it drives change and innovation in our designs and the way we envision our interactive, integrated and inspiring solutions.

In our hyper-connected world, it is only logical that meetings are increasingly taking place on a global level. As a consequence, traditional meetings need to be transformed into a global hub for interaction and connectivity, in which both cyberspace, computing devices, and traditional and digital meeting tools blend perfectly to enable the optimal interaction experience.

When crafting tools and products, or delivering know-how to the customer, i3-Technologies integrates 3 principles as the fundament to enable the optimal meeting and learning environment: interactivity, integration and inspiration. Above this, we cherish 3 design principles to ensure maximal satisfaction of the customer and minimal impact on the environment: User-based Design, Universal Design for Learning and Cradle-to-Cradle.

At i3-Technologies we aim to stay in touch with our customers' expectations and objectives by offering fully integrated technology solutions for any learning or meeting environment. We strive for a clear communication between people and a smooth synergy with the i3 products.
